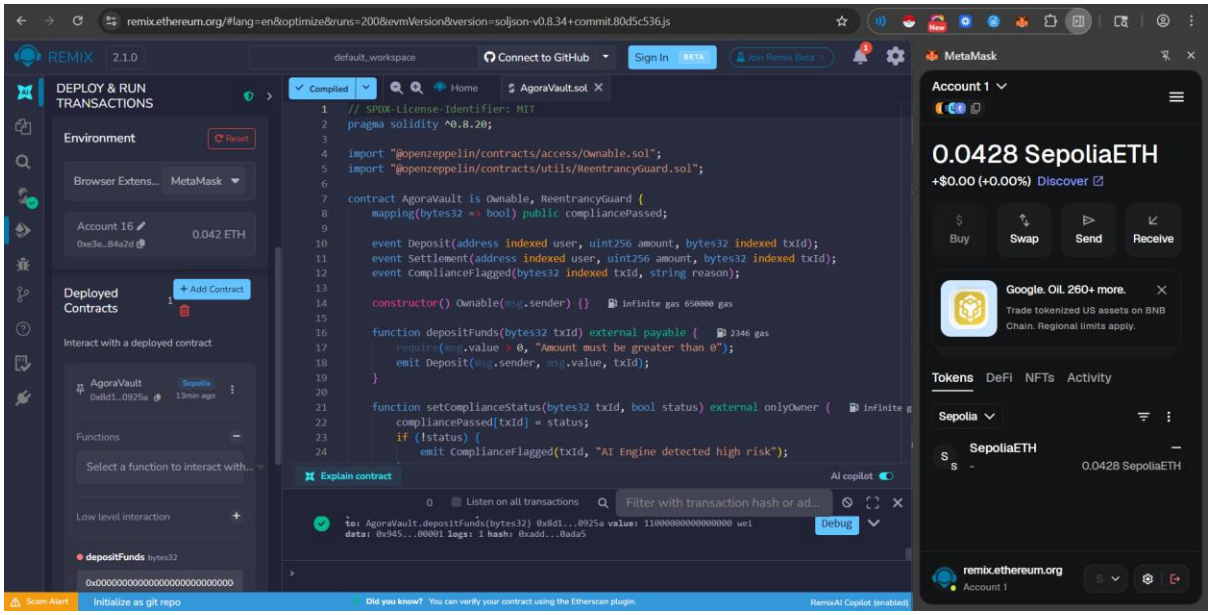
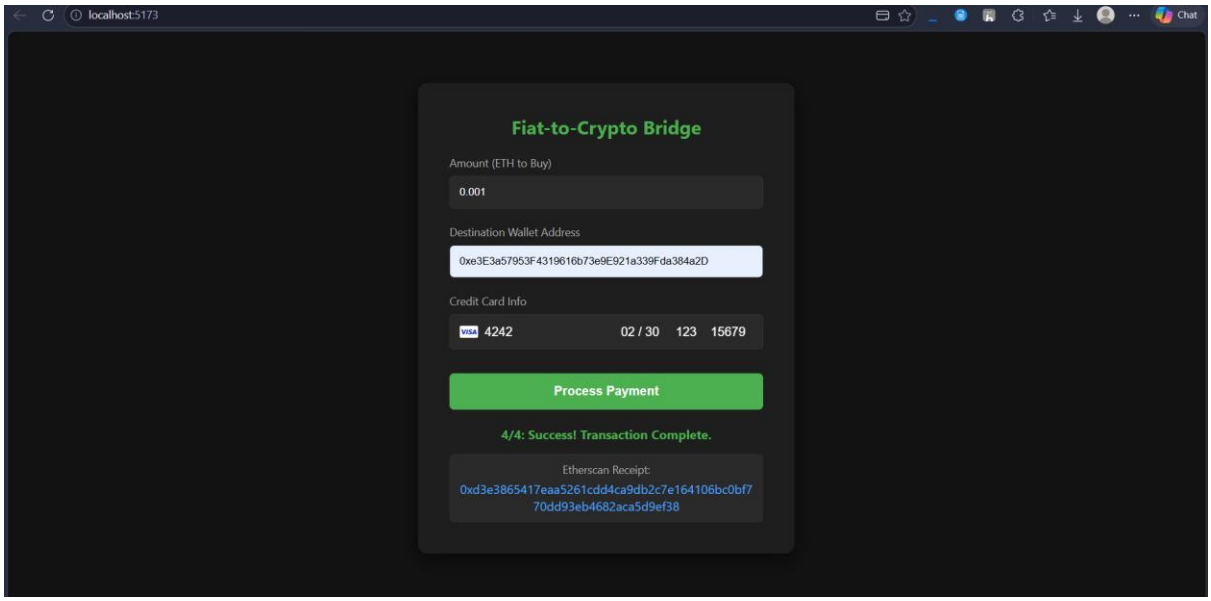
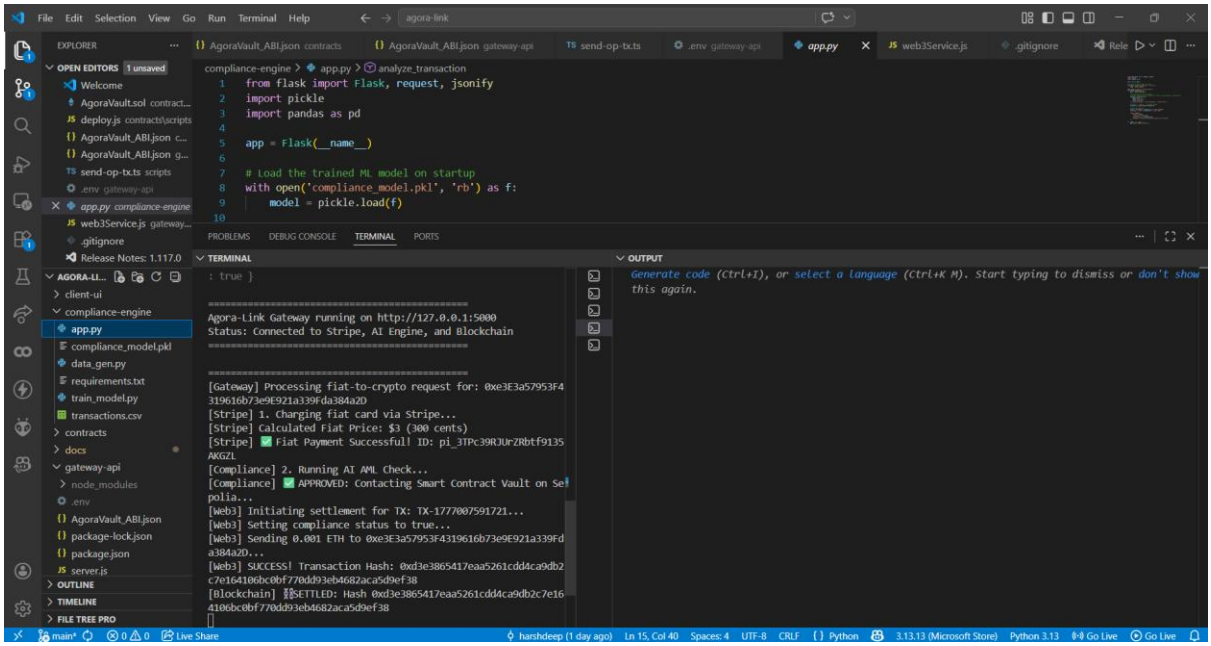
- **Screenshot 1 (Smart Contract Deployment - Remix IDE):** This shows the foundational AgoraVault contract deployed on the Sepolia network via Remix, highlighting the successful implementation of the deposit and withdrawal functions.



- **Screenshot 2 (Frontend Client UI):** This shows the React interface where the user initiates the bridge, utilizing the Stripe <CardElement /> for secure fiat input and tracking the 4-step real-time status.



Screenshot 3 (Python AI Engine Logs): This shows the isolated ML microservice successfully receiving the transaction parameters, calculating the Isolation Forest anomaly score, and returning a "LOW" risk approval back to the Node gateway.



- **Screenshot 4 (Etherscan Settlement Receipt):** This is the live on-chain proof from the Sepolia block explorer. It verifies the final cryptographic settlement, showing the successful, AI-approved transfer of 0.001 ETH from the AgoraVault directly to the destination wallet.
